

Fluid and Melt Inclusions: Applications to Geologic Processes

Mineralogical Association of Canada
Topics in Mineral Sciences Volume 49

Published by the
Mineralogical Association of Canada (MAC)

by

Pilar Lecumberri-Sanchez
and
Matthew Steele-MacInnis
Department of Earth and Atmospheric Sciences,
University of Alberta,
Edmonton, Alberta, T6G 2E3

and

Daniel Kontak
Harquail School of Earth Sciences,
Laurentian University
935 Ramsey Lake Road,
Sudbury, Ontario, P3E 2C6

Short Course sponsored by the Mineralogical Association of Canada,
and delivered at the GAC-MAC meeting, London, Ontario, May 2021

TABLE OF CONTENTS

Preface	vii
1. Constraining fluid and diagenetic events in sedimentary basins by combining fluid inclusion data with burial models: discussions and recommendations – Jacques Pironon	1
2. Applications of fluid inclusions in structural diagenesis – András Fall	17
3. Applications of fluid inclusions to studies of sediment-hosted base metal ore deposits: case studies from the Central U.S.A. and Brazil – Martin S. Appold	47
4. Characterizing fluid and melt in high-grade metamorphic rocks – Omar Bartoli	73
5. Fluid and melt inclusions in diamond as insight into mantle processes – Evan Smith	109
6. A review of silicate and sulfide melt inclusions in felsic and mafic plutonic rocks: examples and practical aspects of study – Jacob Hanley, Kevin Neyedley & Fergus Tweedale	123
7. A protocol and review of methods to select, analyze and interpret melt inclusions to determine pre-eruptive volatile contents in magmas – Rosario Esposito	163
8. Contributions of fluid inclusions to genetic models for mineral deposits – Matthew Steele-MacInnis, Pilar Lecumberri-Sanchez, Dan Marshall & Daniel J. Kontak	195
9. Fluid inclusions in mineral deposit exploration: identification and vectoring – Pilar Lecumberri-Sanchez, Matthew Steele-MacInnis, Simone E. Runyon, Daniel J. Kontak & Baykan Aksu	243
10. Applications of fluid and melt inclusions to magmatic-hydrothermal ore deposits – Simone E. Runyon	263

DETAILED LIST OF CONTENTS

1. CONSTRAINING FLUID AND DIAGENETIC EVENTS IN SEDIMENTARY BASINS BY COMBINING FLUID INCLUSION DATA WITH BURIAL MODELS: DISCUSSIONS AND RECOMMENDATIONS – JACQUES PIRONON

INTRODUCTION	1
IMMISCIBILITY APPLIED TO BASINAL FLUIDS	2
THEORY OF INTERSECTING ISOCHORES – APPLICABILITY TO BASINAL FLUIDS	3
BASIN MODELLING – THEORY, LIMITATIONS AND APPLICATIONS TO FLUID INCLUSION STUDIES	5
CASE STUDIES	7
Case 1: Gas reservoir with coexisting aqueous and gas inclusions	7
Case 2: Oil reservoir with coexisting aqueous and black oil inclusions	7
Case 3: Coexisting aqueous and hydrocarbon inclusions with high ΔT_h	9
Case 4: Fluid inclusion trapping conditions out of the gradient range	10
Case 5: Absence of oil and gas inclusions	12
CONCLUSION	12
Summary	12
Benefits	12
Limitations	12
REFERENCES	14

2. APPLICATIONS OF FLUID INCLUSIONS IN STRUCTURAL DIAGENESIS – ANDRÁS FALL

INTRODUCTION	17
STRUCTURAL DIAGENESIS AND FLUID INCLUSIONS	17
FRACTURE CEMENT AND FLUID INCLUSION PETROGRAPHY	21
MICROTHERMOMETRY	28
MICROBAROMETRY	33
TIMING OF FRACTURE OPENING AND CEMENTATION	36
SUMMARY	39
REFERENCES	40

3. APPLICATIONS OF FLUID INCLUSIONS TO STUDIES OF SEDIMENT-HOSTED BASE METAL ORE DEPOSITS: CASE STUDIES FROM THE CENTRAL U.S.A. AND BRAZIL – MARTIN S. APPOLD

INTRODUCTION	47
LA–ICP–MS STUDIES OF MVT DEPOSITS IN THE CENTRAL U.S.	49
MVT deposits of the Ozark Plateau	50
Illinois-Kentucky district	55
LA–ICP–MS STUDIES OF THE VAZANTE–PARACATU–UNAÍ Zn–Pb TREND, BRAZIL	59
LA–ICP–MS STUDIES OF OTHER SEDIMENT-HOSTED BASE METAL DEPOSITS	61
SEM–EDS STUDY OF THE ILLINOIS–KENTUCKY DISTRICT	62
RAMAN SPECTROSCOPY STUDIES OF CENTRAL U.S. MVT DEPOSITS	65
CONCLUDING SUMMARY	66
REFERENCES	67

4. CHARACTERIZING FLUID AND MELT IN HIGH-GRADE METAMORPHIC ROCKS – OMAR BARTOLI

INTRODUCTION	73
SETTING THE SCENE	74
Terminology	74
Timing of inclusion entrapment	75
Changing the viewpoint: entrapment of melt inclusions upon heating	75
Supercritical liquid	76
EXAMPLES OF FLUID AND MELT INCLUSION STUDIES IN HT–UHT METAMORPHIC TERRAINS	76
Kerala Khondalite Belt, South India	76
Ronda, southeast Spain	80
Ivrea Zone, northwest Italy	81
Athabasca Granulite Terrane, Canada	82
Bohemian Massif (central Europe)	82
Dronning Maud Land, Antarctica	83
EXAMPLES OF FLUID AND MELT INCLUSION STUDIES IN HP–UHP METAMORPHIC TERRAINS	83
Bohemian Massif (central Europe)	83
Kokchetay Massif, Kazakhstan	84
Dora Maira Massif, western Italy	85
Lago de Cignana, northwest Italy	86
Dabie-Sulu, China	86
Sulu Block	87
Dabie Block	87
EXAMPLES OF FLUID AND MELT INCLUSION STUDIES IN CRUSTAL XENOLITHS AND ENCLAVES	88
El Hovazo, southeast Spain	88
Pamir, Asia	89
IMPLICATIONS OF FLUID AND MELT INCLUSION STUDIES FOR GEOCHEMICAL DIFFERENTIATION	89
Shedding light on the mechanisms of crustal melting	89
Shedding light on the processes responsible for crustal magma differentiation	90
Testing and improving the models	93
Melt–fluid immiscibility, extent of carbonic metamorphism and implications for the geological carbon cycle	93
Element recycling in subduction zones	95
REFERENCES	97

5. FLUID AND MELT INCLUSIONS IN DIAMOND AS INSIGHT INTO MANTLE PROCESSES – EVAN M. SMITH

INTRODUCTION	109
PRIMARY MELT AND FLUID INCLUSIONS	110
Fibrous diamond	110
Gemmy lithospheric diamonds	112
Methane in mixed-habit cuboctahedral diamonds	113
Hydrous fluid and ice VII	113
Metallic melt in sublithospheric diamonds	113
FLUIDS ACCOMPANYING SOLID INCLUSIONS	114
Hydrous fluid films around silicate inclusions	114
Hydrogen and methane in sublithospheric diamonds	115

HEALED FRACTURES	115
OTHER FLUID AND MELT INCLUSIONS	116
SUMMARY	117
REFERENCES	117
<hr/>	
6. A REVIEW OF SILICATE AND SULFIDE MELT INCLUSIONS IN FELSIC AND MAFIC PLUTONIC ROCKS: EXAMPLES AND PRACTICAL ASPECTS OF STUDY – JACOB HANLEY, KEVEN NEYEDLEY & FERGUS TWEEDALE	
INTRODUCTION	123
AN OVERVIEW OF PREVIOUS STUDIES	124
MAFIC–ULTRAMAFIC CUMULATE ROCKS, MANTLE XENOLITHS, AND ULTRAMAFIC MASSIFS	129
Mafic–ultramafic cumulate rocks: silicate melt inclusions	129
Mafic–ultramafic cumulate rocks: sulfide melt inclusions	130
Mantle and crustal (cumulate, plutonic-derived) xenoliths and massifs	133
GRANITOID ROCKS, PEGMATITES, AND PORPHYRIES	134
Barren and mineralized (Cu–Au–Pd–Mo–Sn–W) porphyry systems and greisen	138
MELT INCLUSION STUDIES: CONSIDERATIONS AND EXAMPLES IN PLUTONIC SETTINGS	139
Petrographic observations of plutonic melt inclusions	139
Recognizing melt inclusions in plutonic igneous rocks	142
Petrographic evidence for melt–fluid and melt–melt immiscibility	145
Accidental entrapment of saturated phases	146
Microthermometry and homogenization	147
Decrepitation and leakage, fracturing and alteration	149
CONCLUSIONS	149
REFERENCES	150
<hr/>	
7. A PROTOCOL AND REVIEW OF METHODS TO SELECT, ANALYZE AND INTERPRET MELT INCLUSIONS TO DETERMINE PRE-ERUPTIVE VOLATILE CONTENTS IN MAGMAS – ROSARIO ESPOSITO	
INTRODUCTION	163
MELT INCLUSIONS IN VOLCANIC SETTINGS	164
THE PROTOCOL	169
An introduction	169
Petrography	170
Comparison	176
Key signatures of geologic fluid types	178
Interpretation of volatile contents recorded by “normal” MI	179
CONCLUSION	185
REFERENCES	186
Appendix: Table for petrographic description of melt inclusions for beginner inclusionists	194

8. CONTRIBUTIONS OF FLUID INCLUSIONS TO GENETIC MODELS FOR MINERAL DEPOSITS – MATTHEW STEELE-MACINNIS, PILAR LECUMBERRI-SANCHEZ, DAN MARSHALL & DANIEL J. KONTAK

INTRODUCTION	195
ORE-FORMING HYDROTHERMAL FLUIDS	196
Parameters key to hydrothermal mineralization	197
Ligands	198
Temperature/pressure/density	198
Metals	198
Sulfur	198
Phase state	199
Fluid evolution	199
Key signatures of geologic fluid types	199
Meteoric water	199
Seawater	199
Basinal (connate) brine	200
Metamorphic fluids	201
Magmatic fluids	201
ANALYSIS OF FLUID INCLUSIONS	202
Petrography of fluid inclusions	202
Insights obtainable from fluid inclusions	203
Ligands	203
Temperature/pressure/density	204
Major cations and ore metals	204
Sulfur	206
Phase state	206
Fluid evolution	206
Fluid inclusion "types"	207
Inclusion types based on phase assemblage and phase ratios	207
Relationships between fluid inclusion types and categories of geologic fluids	209
Petrographic and genetic relationships between fluid inclusion types	210
SYSTEMATICS OF FLUID INCLUSIONS IN HYDROTHERMAL ORE DEPOSITS	212
Epithermal deposits	212
VMS deposits	212
Mississippi Valley-type deposits	213
Orogenic (Au±W±Sb) deposits	213
Porphyry deposits	213
Fluid inclusion types	213
Ligands	214
Temperature/pressure/density	216
Major cations and ore metals	219
Sulfur	221
Phase state	222
Fluid evolution	223
KEY CONTRIBUTIONS TO GENETIC MODELS	225
Fluid sources and temperatures	225
Fluid evolution and thermodynamic modeling	227
Triggers for mineralization	230
CONCLUSIONS	233
REFERENCES	233

9.	FLUID INCLUSIONS IN MINERAL DEPOSIT EXPLORATION: IDENTIFICATION AND VECTORING – PILAR LECUMBERRI-SANCHEZ, MATTHEW STEELE-MACINNIS, SIMONE E. RUNYON, DANIEL J. KONTAK & BAYKAN AKSU	
	INTRODUCTION	243
	POTENTIAL APPLICATIONS OF FLUID INCLUSIONS IN EXPLORATION	244
	METHODS	245
	Sampling	245
	Sample preparation	245
	Crushing stage	246
	Basic fluid inclusion types	247
	FLUID INCLUSIONS ASSOCIATED WITH MAGMATIC–HYDROTHERMAL SYSTEMS	248
	A conceptual model	248
	Porphyry epithermal systems	249
	Zonation in porphyry systems	249
	Ore location and fertility indicators in porphyry systems	250
	Zonation in epithermal systems	251
	Reliability of the model for porphyry epithermal systems and sources of variability	253
	Volcanogenic massive sulfide deposits	253
	OROGENIC GOLD	255
	SUMMARY	255
	REFERENCES	257

10.	APPLICATIONS OF FLUID AND MELT INCLUSIONS TO MAGMATIC-HYDROTHERMAL ORE DEPOSITS SIMONE E. RUNYON	
	INTRODUCTION	263
	OVERARCHING THEMES AND OPEN QUESTIONS	263
	Compositions of hydrothermal fluids	263
	Chloride complexes	264
	Sulfur-bearing species	265
	H ₂ O and low density vapors	265
	Carbon-bearing species in melts and magmatic-hydrothermal fluids	265
	Fluorine	266
	Dominant (non-ore metal) cations in common crustal fluids	266
	Sources of metals in magmatic–hydrothermal ore deposits	267
	Metal partitioning: Behavior of ore metals in various geologic environments	267
	Partitioning in the presence of melt(s)	267
	Partitioning between liquid and vapor phases	268
	Barren vs. productive systems	268
	The magmatic-hydrothermal transition	269
	PORPHYRY COPPER (\pm Mo \pm Au) DEPOSITS	270
	General characteristics	270
	Evolution of ore-forming fluids	270
	Post ore-deposition alteration	271
	Metal contents of fluid inclusions	271
	Open questions and future research avenues	271
	Sources of metals	271
	CO ₂ in deep portions of porphyry systems	272
	Melt inclusions in hydrothermal veins	272
	Salt (halite) melt and hypersaline inclusions in porphyry systems	272

Alkaline Porphyry Cu–Au Deposits and Associated Epithermal Systems	273
PORPHYRY Mo DEPOSITS	273
General characteristics	273
Evolution of ore-forming fluids	274
Ore precipitation mechanisms	274
Interpretation of C-bearing species in porphyry Mo fluid inclusions	275
PORPHYRY Sn–W–Mo, GREISEN, AND LODE DEPOSITS	275
General characteristics	275
Evolution of ore-forming fluids	275
INTRUSION-RELATED GOLD DEPOSITS	277
General characteristics	277
Evolution of ore-forming fluids	277
Potential importance of polymetallic melts	278
Orogenic gold: General characteristics and similarities to intrusion-related gold deposits	278
RARE METAL DEPOSITS	279
Carbonatite-related systems	279
Immiscibility: Evidence for coexisting melt(s) and fluid(s)	280
Rare-metal, granite- and pegmatite-related deposits: Peralkaline and peraluminous systems	280
Immiscibility: Evidence for coexisting melt(s) and fluid(s)	281
HIGH SULFIDATION EPITHERMAL DEPOSITS	282
General characteristics	282
Evolution of ore-forming fluids	282
Sources of metals and fluids in high-sulfidation epithermal systems	283
IOCG: IRON OXIDE-COPPER-GOLD	283
General characteristics	283
Evolution of ore-forming fluids	284
Early high-temperature alteration	284
Ore mineralization	284
Late hydrolytic alteration	286
Evidence for involvement of magmatic vs. non-magmatic hydrothermal components	286
THE FUTURE OF FLUID INCLUSIONS IN MAGMATIC–HYDROTHERMAL ORE DEPOSIT RESEARCH	287
