

TABLE OF CONTENTS

Preface	ix
1. Nuclear fuel cycles and the economics of uranium	1
2. Uranium deposit types: New classifications	14
3. Geochemical characteristics of uranium and thorium and analytical methodologies	39
4. Radioactivity, heat production and natural reactors	85
5. Magmatic processes involved in uranium deposit formation	99
6. Metasomatic– and metamorphic–hydrothermal uranium deposits	139
7. Low to medium temperature hydrothermal uranium deposits	169
8. Basins and uranium deposits	225
9. Deposits related to low-temperature processes	305
10. Thorium deposits	319
11. Exploration Strategies and the Future of Uranium and Thorium as Energy Resources	335

DETAILED LIST OF CONTENTS

1. NUCLEAR FUEL CYCLES AND THE ECONOMICS OF URANIUM – KURT KYSER & MICHEL CUNEY	1
OVERVIEW OF URANIUM	1
NUCLEAR POWER AND THE FUEL CYCLE	2
Concerns about nuclear power	4
THORIUM	5
ECONOMIC FACTORS	6
ECONOMICS OF DEPOSIT TYPES	9
MINES AND RESOURCES	11
SYNOPSIS	12
REFERENCES	13
<hr/>	
2. URANIUM DEPOSIT TYPES: NEW CLASSIFICATIONS – KURT KYSER & MICHEL CUNEY	14
INTRODUCTION	14
THE 2014 IAEA CLASSIFICATION OF URANIUM DEPOSITS	16
The main uranium deposit types	16
Subtypes and classes	16
1) Intrusive-type deposits	16
2) Granite-related deposits	16
3) Polymetallic iron oxide breccia complex deposits	16
4) Volcanic-related deposits	18
5) Metasomatite deposits	18
6) Metamorphite deposits	18
7) Proterozoic unconformity deposits	19
8) Collapse breccia type deposits	19
9) Sandstone deposits	19
10) Paleo-quartz pebble conglomerate deposits	19
11) Surficial deposits	20
12) Lignite coal deposits	20
13) Carbonate deposits	20
14) Phosphate deposits	20
15) Black shale deposits	20
URANIUM DEPOSIT CLASSIFICATIONS BASED ON GENESIS	20
Magmatic deposits (M)	21
Magmatic crystal fractionation processes (MCF)	21
Partial melting (MPM)	24
Hydrothermal deposits (H)	24
Volcanic–hydrothermal systems	24
Granite–hydrothermal systems (GH)	24
Hydrothermal diagenetic systems (HD)	25
Hydrothermal metamorphic systems (HMp)	27
Hydrothermal metasomatic systems (HM)	27
Na-metasomatism-related deposits (HMNa)	27
K-metasomatism-related deposits (HMtK)	28
Skarn-related deposits (HMSk)	28
Meteoric water infiltration-related deposits (M)	28
Basal-type (MB)	29
Roll fronts deposits (Mrf)	29

Synsedimentary deposits (S)	29
Mechanical sorting-related synsedimentary deposits (SMs)	29
Redox trapping in marine environments (SRtm)	29
Redox trapping in continental environments (SRtc)	30
Crystal chemical and redox trapping-related deposits (SCcr)	30
Evapotranspiration-related deposits (E)	30
Other Types (O)	30
REFERENCES	30

3. GEOCHEMICAL CHARACTERISTICS OF URANIUM AND THORIUM AND ANALYTICAL METHODOLOGIES
– KURT KYSER & MICHEL CUNNEY **39**

URANIUM IN ROCKS AND MINERALS	39
AQUEOUS GEOCHEMISTRY OF URANIUM	40
Low temperatures	40
High temperatures	42
URANIUM SOLUBILITY IN SILICATE MELTS AND MAGMATIC FLUIDS	43
Uranium in fluids from granite	45
Application to Natural Examples	45
ALTERATION OF URANIUM MINERALS	46
Mobility of uranium in groundwater	47
BIOGEOCHEMISTRY OF URANIUM	48
Uranium and human health	49
THORIUM	49
Thorium Distribution on Earth	50
THORIUM TRANSPORT	50
THORIUM DEPOSITION	52
THORIUM MINERALOGY	52
Thorium Silicates	52
Uranothorite	52
Allanite	55
Thorium-bearing oxides	57
Thorianite	57
Th-bearing Nb–Ta–Ti oxides	57
Aeschynite and euxenite group minerals	57
Pyrochlore group minerals	57
Samarskite group minerals	57
Fergusonite group minerals	57
Thorium Phosphates	57
Monazite	57
Xenotime	58
Fluorapatite	58
Thorium-bearing Carbonates	58
Bastnaesite	58
ANALYTICAL METHODOLOGIES	58
Radiogenic isotopes and uranium ore deposits	58
Decay schemes	59
The age equation	59
U–Pb systems	63
Sm–Nd systems	65
K–Ar and Ar–Ar systems	65
Radiogenic isotopes as Tracers	66

Stable isotope geochemistry	67
Application of stable isotope geochemistry to uranium	70
New isotope systems	71
Fluid inclusion studies	73
REFERENCES	76

4. RADIOACTIVITY, HEAT PRODUCTION AND NATURAL REACTORS – MICHEL CUNEY & KURT KYSER **85**

RADIOACTIVITY AND RADIOACTIVE DECAY	85
MEASURING RADIATION EXPOSURE	87
HEAT FLOW AND ENERGETICS OF THE EARTH	87
NUCLEAR RADIATION EFFECTS IN MINERALS	89
Radiation damage in a U- or Th-rich crystal	89
Pleochroic haloes	90
Irradiation of mineral oils	90
Radiation-induced coloration in minerals	91
Radiation damage in quartz	91
OTHER EFFECTS AND APPLICATIONS OF RADIOACTIVITY	91
Autoradiography	91
Fission track dating	92
Induced fission tracks	93
Radon emission	93
Helium emission	94
Water radiolysis	94
THE NATURAL NUCLEAR REACTORS OF OKLO	94
REFERENCES	95

5. MAGMATIC PROCESSES INVOLVED IN URANIUM DEPOSIT FORMATION – MICHEL CUNEY & KURT KYSER **99**

INTRODUCTION	99
MAGMATIC DIFFERENTIATION	100
Ilímaussaq (South Greenland)	100
Regional geology	100
Geochemistry	102
Uranium mineralization	104
Resource estimations	106
Bokan Mountain (USA)	107
Regional geology	107
Geology of the pluton	107
Geochemistry	109
Uranium mineralization	109
Genetic model	112
Other occurrences of albitic episyenite	113
Other world occurrences of mineralized peralkaline granite	113
Albite–riebeckite granite plutons of Kaffo Valley, Nigeria	113
The Ghurayyah deposit, Saudi Arabia	113
Poços de Caldas U–Mo–Zr mineralization (Brazil)	113
Thor Lake (Canada)	117
Palabora carbonatite (South Africa)	118

PARTIAL MELTING	118
Introduction	118
The Rössing Deposit (Namibia)	118
General Geology	118
General characteristics of the U mineralization	123
Alaskite geochemistry	124
Parameters controlling the formation of the Rössing deposit	125
Origin of the mineralized alaskites	128
Other world occurrences of Rössing-type mineralization	129
Archean Occurrences	129
Hudsonian s.l. occurrences	130
Grenvillian occurrences	131
Pan-African Occurrences	131
REFERENCES	132

6. METASOMATIC– AND METAMORPHIC–HYDROTHERMAL URANIUM DEPOSITS – MICHEL CUNEY & KURT KYSER **139**

INTRODUCTION	139
URANIUM DEPOSITS RELATED TO Na-METASOMATISM	139
General characteristics	139
The central Ukraine province	141
Regional geology	141
Mineral paragenesis	142
Uranium minerals	144
Geochemistry of metasomatite	144
Th–U–REE geochemistry	145
The Krivoy Rog district	146
The Michurinkoe deposit	147
Resources	148
Genetic model	148
Lagoa Real (Bahia, Brazil)	149
Regional geology	149
Lagoa Real granite	150
Na-metasomatism	150
Uranium mineralization	151
Geochemistry	152
Genetic model	155
Other world occurrences of uranium deposits associated with Na-metasomatism	155
Valhalla (NW Queensland, Australia)	155
Skappesavon (<i>northern Sweden</i>)	156
URANIUM DEPOSITS ASSOCIATED WITH K-METASOMATISM	156
Introduction	156
Geologic setting	157
Alteration	157
Mineralization	157
Genetic model	159
SKARNS	159
URANIUM DEPOSITS RELATED TO VERY HIGH-TEMPERATURE METASOMATISM:	
TRANOMARO, MADAGASCAR	159
Regional geology	159

Metasomatic skarns	160
Th–U mineralization	161
Genetic Model	161
HYDROTHERMAL METAMORPHIC URANIUM DEPOSITS	162
REFERENCES	163

7. LOW TO MEDIUM TEMPERATURE HYDROTHERMAL URANIUM DEPOSITS 169

INTRODUCTION	169
IGNEOUS ROCK TYPES AND URANIUM METALLOGENESIS	169
Peraluminous leucogranite and volcanic rocks	170
Highly fractionated calcalkaline granite	170
S-type granite	171
The Guéret type biotite-cordierite granite (G-type)	171
Two mica leucogranite (L-type)	171
Peralkaline granite, syenite and volcanic rocks	172
High K calc-alkaline granite	173
INTRA- AND PERI-GRANITIC URANIUM DEPOSITS	174
Relations between Variscan granite types and U mineralization	175
Radioelement distribution in the Variscan crust	176
Characterization of the protoliths of U-enriched peraluminous leucogranite	176
Successive fractionation in the Saint Sylvestre granite complex	178
Relations between magmatic U enrichments and hydrothermal deposits	183
Alteration and uranium mobility	183
Characteristics of vein uranium deposits	185
OTHER VEIN-TYPE URANIUM DEPOSITS	186
METALLOGENETIC MODELS FOR THE VARISCAN GRANITE RELATED URANIUM DEPOSITS	186
VOLCANIC-RELATED URANIUM DEPOSITS	186
The Streltsovskoye caldera (Transbaikalia, Russia)	188
Geological setting	188
Uranium distribution in granite	190
Uranium deposits	192
Uranium sources	194
Other volcanic-related uranium districts of Asia	195
Dornot (northeastern Mongolia)	196
China	196
Other volcanic-related uranium districts of the world	196
The U-Mo Kitts-Michelin deposit	196
Th-U-REE Rexpa deposit	197
U-Zr-F Moonlight and U-Hg Aurora deposits	197
U-Mo-F Marysvale deposit	197
Lakeview district U mineralization	197
U-Be-Li-F Spor Mountain mineralization	197
U-Mo mineralization of the Sierra Peña Blanca	198
U-Mo Ben Lomond deposit	198
U-Mo-Sn-F Maureen uranium deposit	198
Arjeplog-Arvidsjaur U province	198
Duobblon deposit	198
Skuppesavon U district	198
Macusani U mineralization	199
Los Frailes U occurrences	199

La Puna U mineralization	199
Novazza (U-Mo-Zn) and Val Vedello (U, Cu, Pb, Zn, Sb, As, and Hg) deposits	199
Vulsini and Vico calderas	199
U deposits related to volcanic rocks in Bulgaria	200
MODEL FOR URANIUM DEPOSITS ASSOCIATED WITH VOLCANISM	200
Nature of the magmatism	200
Melt chemistry recorded by magmatic inclusion	200
Nature of the volcanic system	201
OLYMPIC DAM	201
Geological setting	201
The Roxby Downs Granite	202
The Gawler Range Volcanics	202
The IOCG mineralization	202
Uranium mineralization	202
LOW TO MEDIUM TEMPERATURE HYDROTHERMAL DEPOSITS HOSTED IN METAMORPHIC ROCKS WITHOUT CLEAR RELATIONS WITH GRANITES	203
Beaverlodge district	203
Introduction	203
Geology	203
Deposits	205
Genesis of the Beaverlodge deposits	207
Schwartzwalder deposit	209
Introduction	209
Alteration	209
Mineralization	209
Source	209
Ore-forming processes	210
Midnite deposit	210
Geological Setting	210
The Midnite ore body	210
Ore deposit model	210
REFERENCES	211

8. BASINS AND URANIUM DEPOSITS	225
BASINS AND EARTH EVOLUTION	225
UNCONFORMITY-RELATED DEPOSITS	226
Proterozoic Basins – Why so much uranium?	227
ATHABASCA BASIN	229
General geology	229
Alteration	232
Uranium deposits	235
Constraints on source of fluids	238
Timing of fluid events and their relationship to mineralization	241
Genetic models and modeling	242
THELON BASIN, CANADA	245
Geologic setting	245
Sedimentology and stratigraphy	245
Uranium deposits	248
Paragenesis and fluid evolution in the Thelon Basin	249
KOMBOLGIE BASIN, AUSTRALIA	252
Sedimentology and stratigraphy	254

Paragenesis and fluid evolution in the Kombolgie Basin	255
Uranium depoists	257
Jabiluka	257
Nabarlek	260
Westmoreland	261
Timing and spatial extent of the mineralizing fluids	263
OTHER BASINS HOSTING UNCONFORMITY-RELATED MINERALIZATION	265
Hornby Bay	265
Otish Basin	266
Karku, Russia	268
Franceville Basin, Gabon	271
CONCLUSIONS	273
SANDSTONE-HOSTED DEPOSITS	274
Basal-type	276
Tabular-type	277
Uravan Mineral Belt and Colorado Plateau	281
Monument Valley–White Canyon districts	282
Powder River Basin, Wyoming	283
Asia	283
Roll-front type	284
Tectonic/lithologic type	286
Solution collapse breccia-type deposits, Arizona, USA	286
Shinkolobwe, D.R. Congo	288
Kazakhstan	289
Niger	289
REFERENCES	289
<hr/>	
9. DEPOSITS RELATED TO LOW-TEMPERATURE PROCESSES	305
LOW-TEMPERATURE DEPOSITS	305
Quartz-pebble conglomerate uranium deposits	305
Blind River-Elliot Lake district	306
The Witwatersrand Basin	308
Koli	310
Surficial uranium deposits	310
Calcrete-hosted uranium deposits	310
Phosphate and shale deposits	313
Lignite-coal deposits	314
Wetland deposits	314
Seawater	315
REFERENCES	315
<hr/>	
10. THORIUM DEPOSITS – MICHEL CUNNEY & KURT KYSER	319
INTRODUCTION	319
WORLD RESOURCES	321
THORIUM DEPOSITS	322
Deposits related to crystal fractionation	322
Acidic plutonic, pegmatitic, or volcanic rocks	322
Carbonatites	323
The Bayan Obo deposit	323
The Fen Complex	324
The Araxá carbonatite	324

The Mountain Pass deposit	324
The Poços de Caldas volcano-plutonic complex	324
The Palabora intrusive complex	324
Carbonatite occurrences in Australia	325
Deposits related to partial melting	325
Deposits related to metasomatic systems	325
Deposits related to high temperature hydrothermal fluids	326
Uranothorite veins	326
Monazite veins	328
Syn-sedimentary deposits	328
Coastal placers	328
Dunes	329
Offshore Placers	329
Stream Placers	329
Fossil Placers	329
Metamorphosed Placers	329
Coal, lignite	330
CONCLUSIONS	330
REFERENCES	330

<i>11. EXPLORATION STRATEGIES AND THE FUTURE OF URANIUM AND THORIUM AS ENERGY RESOURCES</i>	335
COMMON DENOMINATORS	335
Timing is everything	335
Knowledge of the nature of the fluids	336
Gradients in redox environments	336
The source of uranium	336
Carbon is an effective reductant for fixing uranium	337
Mineralogy	337
Sedimentology	337
Structures	337
Uranium deposits are geochemical anomalies	337
RADIATION SAFETY REGULATIONS	338
CASE STUDY APPLICATIONS	338
Geology	338
Remote sensing	338
Geophysics	338
Geochemistry	340
REFERENCES	343
